POLCA stands for "Paired-cell Overlapping Loops of Cards with Authorization". It is a variant of Kanban, suitable for companies who produce many different and/or customized products. POLCA is a work-load controlling system that is part of a complementary management philosophy to Lean called Quick Response Manufacturing QRM).

This wizard assists in calculating the number of POLCA needed between two QRM cells for a defined planning period. This tutorial will guide you through the steps to create a simple example with calculations.

#### Viewing/printing eVSM Tutorial:

This tutorial is designed for two page layout. If printing, you will need double-sided print.

For on-screen viewing, save the PDF file to your PC and then open it in Acrobat Reader (not in a web browser). In the Acrobat menus, click "View>Page Display", make sure "Show Cover Page in Two Page View" is checked and then select "Two Page View".
